

Paint Software Basics

Learning Objectives

- Open Paint and identify its interface components
- Use basic tools like pencil, brush, and eraser
- Save a drawing in Paint

Engage (5-7 minutes)

Think of a blank slate used by village potters to shape clay into pots and vessels. MS Paint is like that blank slate for digital art—it gives you tools and a canvas to create anything you imagine. Let us learn to use this creative playground.

Explore (10-12 minutes)

Open MS Paint on the computer. Look around the interface and identify the ribbon at the top with tools, the white canvas in the center, and the color palette. Click on each tool—pencil, brush, eraser—and see what happens when you draw on the canvas. Write down what each tool does.

Explain (10-12 minutes)

MS Paint is a simple drawing program that comes with Windows. The ribbon contains all tools organized in groups. The canvas is your drawing area. The color palette lets you choose colors. You can resize the canvas, undo mistakes, and save your work.

Elaborate (8-10 minutes)

Draw a simple village scene using only the pencil tool. Now redraw it using brushes for different effects. Add colors from the palette. Save your work as “my_village.jpg” on the desktop. Compare your drawing with a partner and discuss which tools worked best.

Evaluate (5-8 minutes)

Exit ticket: Name three tools in MS Paint and what each does. Show how to save a drawing. Write one advantage of using Paint for beginners.
